Measurement Prerequisites

Self-Declaration Products

Private Cloud Consumption Monitoring

Licensing Overview

Private Cloud Ed. Use Type

Full Use Equivalent FUE Factor

Advanced Use

→ 1 Usr = 1 FUE

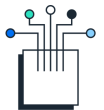

Core Use

→ 5 Usr = 1 FUE

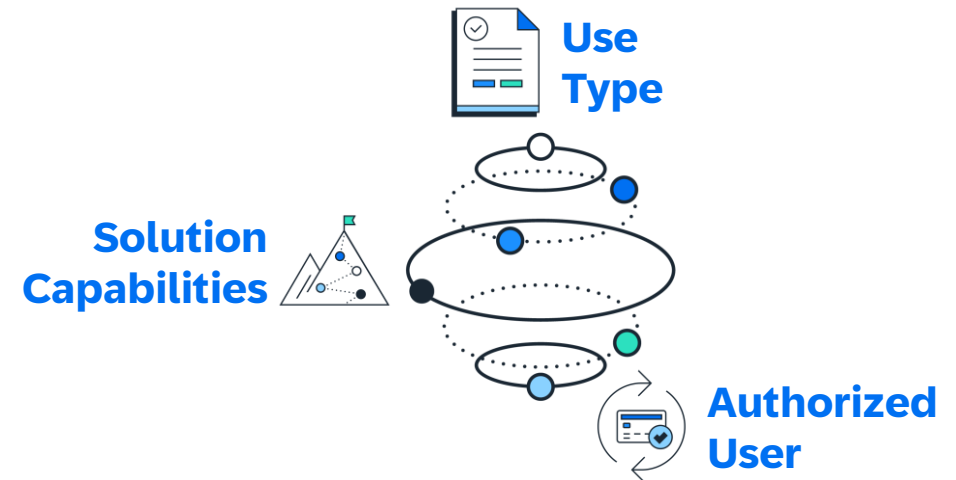

Self-Service Use

→ 30 Usr = 1 FUE

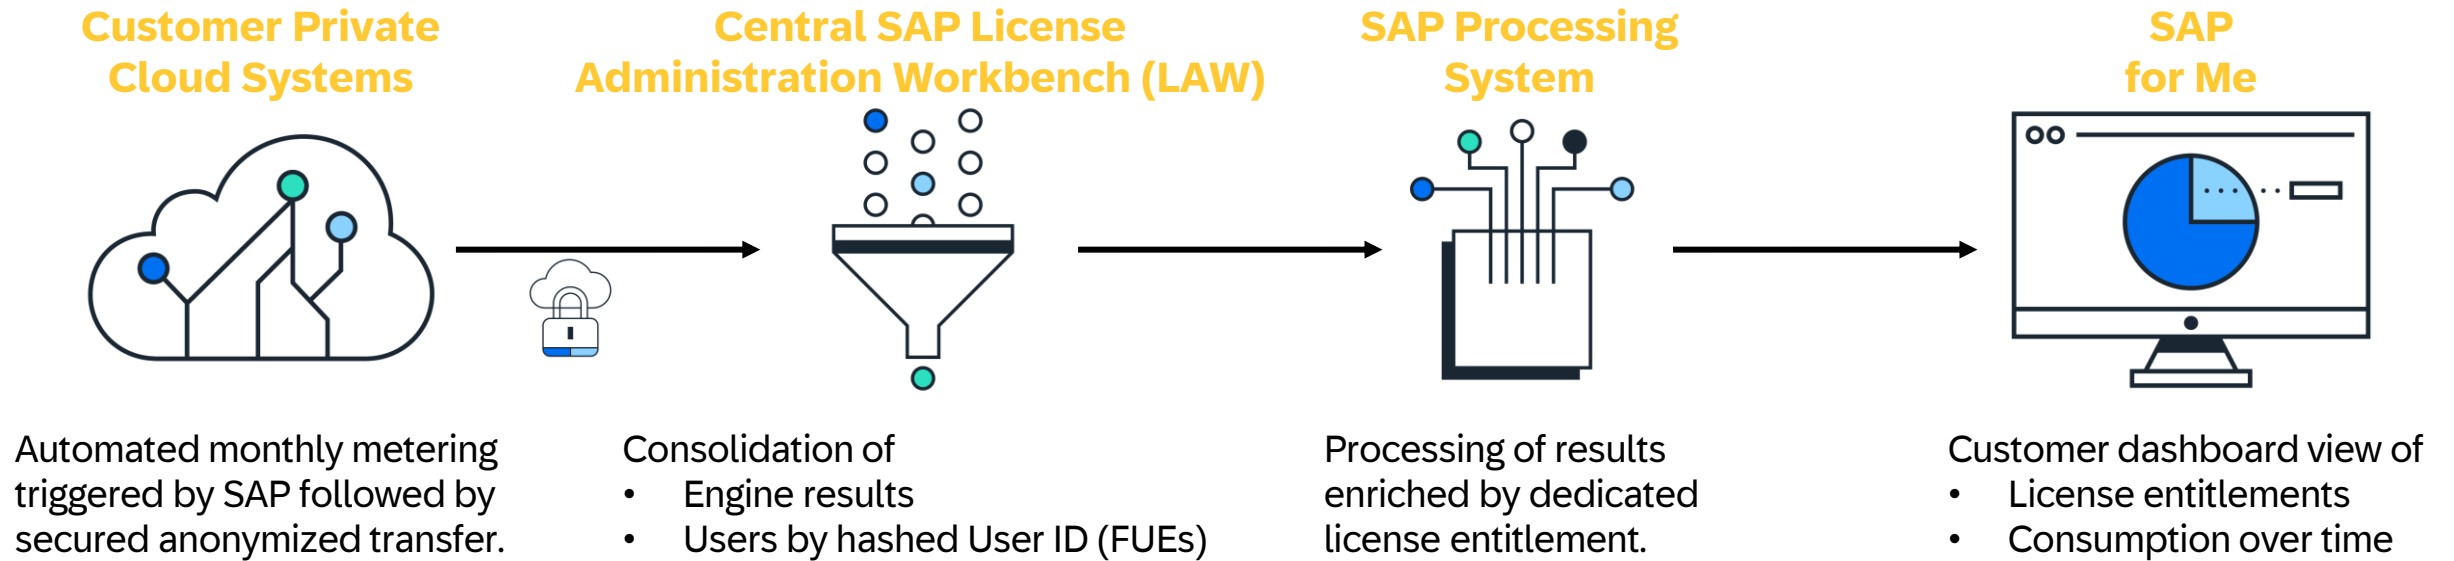

Developer Access → 0.5 Usr = 1 FUE

Pure Technical Engine Use does not require a use type.

Measurement Flow Overview

Measurement Prerequisites

All systems need to be on a release \geq SAP Basis 752 (including all support packages) to be enabled for the automated metering.

The metering of Private Cloud systems will be triggered centrally for all enabled systems.

[Implement relevant pricelist: 06 SAP S/4HANA Private Cloud Edition, or 07 SAP ERP Private Cloud Edition.](#)

[Delete all user classification in USMM.](#)

User Housekeeping: Revise and update validity dates (valid from/valid to) for all users.

Productive Core ERP + Mixed systems:

- Implement [Note 3113382](#).
- [Run the report SLIM_USER_CLF_HELP with the newest PCE ruleset attached to the note.](#)
- Revise which roles and authorizations drive the classification.
- If required adjust roles and authorizations.
- Transfer role classifications.
- If there are users that only use engines and no further core functionality, classify them manually as Cloud Technical Engine Use.
- Manual classification will overrule automated user classification.

Productive Engine (non-ERP) systems:

- Classify all engine users manually as Cloud Technical Engine Use.
- Assign users with specific functions (like administrators or key users) manually to relevant use type.

Development systems:

- Implement [Note 3333812](#).
- [Run the report SLIM_DEV_CLF_HELP.](#)
- Verify the details of the developer users identified by the report.
- Classify the identified developer users based on the output of the report ("Classify Users" button).

Self-Declaration Products
